Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gellert (EP 0609676) in view of Fujioka et al. (DE 4402818). Gellert teaches an injection nozzle (10) with a thermocouple (18) extending through a bore (82) in the nozzle. Gellert does not teach that the nozzle is used to inject gas. However, the nozzle is capable of injecting gas, and it is well known in the art to do gas assist injection molding. Further, Fujioka et al. teaches measuring the temperature of nozzles utilized for gas assist injection molding. It would have been obvious to a person of ordinary skill in the art at the time of the invention to use the apparatus taught by Gellert to inject gas while monitoring temperature. The motivation to combine generally well known art or, in the alternative, Fujioka et al., with Gellert is to provide monitoring of a gas assist injection process, which would prevent blow-out and form a more durable product in an efficient manner.

Allowable Subject Matter

3. Claims 1-13 are allowed.
